## Chandrayaan-3 performs 2nd orbit-raise manoeuvre

India's third lunar mission that took a successful flight on Friday from the Satish Dhawan Space Centre (SDSC), Sriharikota, performed the second orbit-raising manoeuvre on Monday, the Indian Space Research Organisation said. "The second orbit-raising manoeuvre (Earth-bound apogee firing) is performed successfully. The spacecraft is now in 41,603km x 226km orbit. The next firing is planned for tomorrow between 2pm and 3pm IST," said Isro. The first orbit-raising manoeuvre was completed on Saturday. India's third lunar mission, which was launched into orbit on Friday, is on a 40-day journey to the moon. HTC
