POEM-3 mission achieves all objectives: Isro

NEW DELHI: The PSLV (Polar Satellite Launch Vehicle) Orbital Experimental Module-3 — India's unique space platform which uses the spent PS4 stage of the PSLV-C58 vehicle that launched XPoSat on January 1 — successfully achieved all its objectives, Isro said on Saturday.

"After deploying the satellite into its intended orbit at 650 km, the vehicle was lowered to 350 km circular orbit to minimize the time of orbit decay after completion of the experiment," Isro said in a statement.
