

SNAPSHOT

A Falcon has landed

A RE-USEABLE ROCKET is one step closer. US company SpaceX has launched and landed a Falcon 9 rocket, sending it into low Earth orbit to deliver satellites and then returning it to Cape Canaveral, Florida. In this picture, a crane was attached to the landed rocket before it was returned to its hangar. In January SpaceX said it planned to fire up the rocket once more to check it worked, but would keep it tethered to the ground. It wants to keep the rocket on Earth for display purposes.
