## Pixel to launch its 3rd satellite

**B**engaluru-based Pixel is set to launch their third hyperspectral satellite, Anand, into space. The launch is taking place on an Isro PSLV rocket on Saturday at the Sriharikota Launch Complex in Andhra Pradesh. Pixel was the first Indian

company ever to launch a commercial satellite to space when it launched its satellite Shakuntala in April earlier this year on a SpaceX launch. Anand is a hyperspectral microsatellite which weighs 15 kg and has over 150 wavelengths that will enable it to see our planet in a lot more detail than today's non-hyperspectral satellites with not more than 10 wavelengths. The imagery from the satellite can be used to detect pest infestation, map forest fires, identify soil stress and oil slicks amongst other things.
